

U.L.C. TANKS

Fuel Stop CardLock Station

The Efficient Fueling Solution for your Business

Aboveground CardLock Station

Choosing the right tools for your organization is essential, and when it comes to unattended fueling operations, nothing compares to the Fuel Stop - Aboveground CardLock Station (ACS) system.

The normal installation period for a fully working unit is on average three to five days, with no excavation with tank's base ready. The short and easy way in which the system is up running constitutes the most significant advantage over existing systems.

The Fuel Stop A.C.S. enables your company to reduce operation cost and provides a low-priced fuel for your clients. It is a reliable way for dispensing petroleum products.

The Fuel Stop A.C.S. is available in different size, from a small unit to the maximum 80,000 Liter system. Each tank is manufactured to U.L.C. standard and the client's specifications.

Standard Design Features:

- Fully functional, unattended CardLock fueling station
- Accepts nationwide fueling network or your own proprietary network cards
- Low installation cost and simple management
- Small overhead expenses compared to conventional gas station
- Registered bankcard feature permits 24-hour fueling where unattended public fueling is generally restricted
- Enable to sell fuel at a lesser cost with more profits (Proprietary Fueling Network)
- Divided tank option permit the retailing of different products
- Open 24/7 with lighting and tank protections included
- Waste, cleaning amenities and other accessories available on request

Management:

- Computerized data acquisition accessible on-site or via modem
- Stores all transaction data, site data, driver and vehicle data in an indoor controller, safe from exterior mishaps
- Daily and monthly credit allocations per card/key/account lets you set fueling restrictions
- Print receipts after purchase upon request
